

**Guess where you're really putting your lawn fertilizer this spring.**

Every spring the snow melts, the rain falls, and the water that runs off your yard carries fertilizers, herbicides and pesticides into our creeks and streams. And finally into our rivers. Depositing pollutants that can harm fish, wildlife, and vegetation. Even compromise our major source of drinking water. But we can all do something about it and still keep our yards looking beautiful. Plant more trees and shrubs so you'll have less bare lawn surface that allows water runoff. Check into eco-friendly lawn fertilizers. And you may not need as much pesticide and herbicide as you think, so read the manufacturer's recommendations. You'll be helping to protect our most valuable liquid asset. Our water.
